Installation and testing instruction

packing list

Tools needed :

- Monkey Wrench • Philips screwdriver • Glass glue
- Tape measure • Pencil or marker pen • Glass glue gun

special hose

water input angle valve

Remote with 3 battery

Manual

Installation guide

1.Measure the distance from the back of the waste outlet on the toilet to the wall hub fitting to determine the length of the P-trap connector. The connector should extend approximately 1-1/2" into the hub fitting.

2.Trim the P-trap adapter with a hacksaw to the appropriate length as necessary. Apply PVC or ABS glue around the P-trap connector and place inside the hub fitting

3.Slide the toilet into place and press the waste outlet into the P-trap connector.

4.Connect the water supply tubes to the toilet. Turn on the water supply and flush the toilet several times to check for any leaks around the back or base.

Angle valve

Braided Hose

5.Finish your installation by applying latex caulk or tile grout around the base of the toilet

Water pipe connection and installment

1. Install the new angle valve and connect to the one end of special hose.
2. When power is on , adjust the valve and control the water pressure under 7.5kgs.

old valve

new valve

Note:  
The toilet uses spiral siphon jet flushing technology .If the water pressure is high in your area(over 3kgs water pressure ), there may some splash and noise when flushing . Then please control valve and adjust the water pressure.

Spiral siphon jet flushing

control valve

close the valve

Reminder :

It is normal phenomenon that the nozzle flows when open angle valve for the new products and it will be normal after recover power supply .

Please stop power and water supply when dismantling.

Installation and testing instruction

V. Trial operation

1. After finished connection of water supply, open the angle valve and switch on the power.  
The magnetic valve will flush the toilet and the nozzle come out which is the self-inspection process.  
The water temperature indicator flashes which means the water tank is getting water and after 40 seconds the indicator stop flash which means finish water input.  
( It is normal for the nozzle delay the spray for 10-15 seconds for the first time use)

normal phenomenon

**Note: It is normal phenomenon for the nozzle comes out and flows when open the angle valve and get the water supply. After power is on , the nozzle will go back and stop flowing.**

Function confirmation

- 1.Please check each function according to the manual.
2. Switch on the power and put a wet towel or cloth on sensor area.  
After 1 minutes, the water will be heated as set temperature and the warm air will work when you press the dry key.
3. when there is no power supply, no function can work except the non-electric flush toilet.

put a wet towel on sensor area

Pair remote controller: When seat on the toilet:

- Step 1: Keep pressing side button for 5 seconds till heard “BEEP”, the LED display will blink at the same time, now the toilet is waiting for pair.
- Step 2: Press any button on the remote controller, will heard “BEEP”, and LED display stop blink, pair finished.

The remote controller and toilet were already paired before leave factory; if need to change remote controller, then need to be paired to use.

VI. Maintenance

Main body cleaning

1. Clean with foam rubber or soft dry cloth with mild detergent.
- 2.Note : Do not sue thinner, benzolin,detergent, chemical ,pesticide, reodorant to wipe.

2. Open the T joint water input cap.
3. Take out the filtering mesh and clean it with toothbrush.
4. Put it back and recover the water supply.

take down the cap

clean the mesh

Not use for long time -Drainage

1. Stop the power supply.
2. Stop the water supply.
3. Lift up the main body .
4. Screw out the drainage screw and drain out water.
5. Put the drainage screw back.

Lift up the seat cover

screw out the drainage screw

VII .Specification

Power Voltage		220V~240V 50~60Hz 1650W	heated seat	temperature	room temp./low 30°C./medium 35°C./high 40°C
water supply	water input	connect to the water pipe directly		heating power	40W
	water pressure	0.08MPa-0.75MPa (0.8kgf/cm²-0.75kgf/cm²)		safety device	temperature fuse
warm wash	rear wash water volumn	05L/min - 0.9L/min	warm air dryer	temperature	room temp./low 35°C./medium 40°C./high 45°C
	front wash water volumn	0.5L/min - 0.9L/min		heating power	200W
	tank volumn	300ML		safety device	temperature fuse
	temperature	room temp./ low 33°C./medium 37°C./high 40°C	Other safety device		earth leakage protector
	heating power	1600W	power cord length		1.5m
	safty device	floating switch / temperature fuse / water level sensor	Net weight		46kg

Confirm the following points before the maintenance application.

phenomenon	inspection method	solution
Fail to run	power failure or forget to switch on	confirm the power is on
		reconnect the power
The nozzle donot spray orthe water do not flow smoothly	water supply failure or water tap shut off	check the water supply and turn on the valve
	filter mesh is jammed	check the filter mesh
	water outlet is jammed by limescale	clean the nozzle with toothbrush
water leakage	connection parts not tight	make the connection tight
low temperature for water or seat	temperature not set	reset the temperature

Note

- 1.Please stop the water supply if the power is suddenly off on the process of using. The product will run self-checking system and recover after power on.
- 2.Please use our special angle valve and other accessories.
