

Intelligent toilet, model Major&Maker Luxurious 1013BQ

Functionality and principle of operation:

- Convenient and intuitive control using the remote control. Access to selected functions on the side panel. Built-in LED display.
- High-quality washing nozzle with two independent washing water jets made of stainless steel, resistant to dirt and corrosion.
- Self-cleaning function for the washing nozzle before and after washing.
- Rear and front cleaning using unlimited hot water (heating power: 1300W, water consumption 0.5l / min - 0.9l / min, temperature adjustment options: room, 30°C, 35° C, 40°C).
- Built-in wash water tank with 0.3l capacity to ensure stable water flow pressure. Automatic water change every 72 hours.
- Advanced capacitive-flow heating system guarantees immediate heating and stable water temperature during washing.
- An additional ceramic valve that protects the interior of the installation from limescale.
- Option to switch the nozzle mode (spot washing, massage, turbo mode with intense water pulsation, which supports the defecation process).
- Adjustable water pressure level (4 adjustment options in the range of 0.08MPa - 0.75MPa).
- Possibility to adjust the position of the nozzle (4 adjustment options depending on preferences).
- Built-in stainless steel dryer. Drying function (heating power: 200W, temperature adjustment options: room, 45°C, 50°C, 55°C).
- Baby wash mode (quick washing and drying with operating parameters suitable for children).
- Automatic mode (the entire cycle from washing to drying).
- Heated seating (heating power: 50W, temperature adjustment options: room, 30°C, 35°C, 40°C).
- ECO mode for energy saving, in which the seat and water are not heated while the sensor does not detect presence.
- Possibility to open or close the cover and the lid by putting the foot to the sensor, choosing the appropriate option on the remote control or manually with the support of an automatic mechanism.
- The toilet seat and lid closes automatically 2 minutes after using the toilet.
- The coating of the toilet seat and lid is made of high quality ABS materials resistant to discoloration, bacterial deposition, UV radiation and fire.
- Built-in system that draws rinsing water directly from the source, so you can save space in the bathroom, as there is no need to build a frame with a tank. Flushing water consumption: 4.5l.
- Mechanical water flush function in case of lack of electricity.
- Automatic siphon water flushing and cleaning the toilet interior with a spiral jet.
- Built-in deodorizer from carbon bamboo.
- For the sake of long life, high-class electronic components have been used, prepared for trouble-free operation for a period of 8 to 15 years.
- Shell interior backlight function.
- Attractive appearance, quality of materials used and uniform coating that facilitates keeping the device clean.

Product Parameters:

- Voltage: 220V-240V 50Hz-60Hz 1650W
- Dimensions: 670mm x 418mm x 480mm
- Weight: 46kg
- Type of connection to the sewage system: horizontal outlet
